

SITE COMMANDER

TAKE CONTROL OF WEB SITE CONTENT

Site Commander gives you the power to allow multiple people to add and edit Website content directly over the Internet using only a browser login.

Easy and Secure Web Site Content Updates

Gone are the days of paying a web developer to make changes on your website. Site Commander opens the capability of updating your website through any Internet connected browser. By logging into a secured Administration Area you access a simple browser-based interface to add/edit pages, text, and pictures from anywhere in the world.

All You Need is a Browser

No special software or Internet development tools are required on your PC and you don't have to know anything about building a web site or programming in HTML! We design a working framework or the "look and feel" of the site to your specifications and you supply the content. You simply make the changes you want to the site through your browser and the changes take place on the site immediately.

Unfolding roll-over menus are automatically updated as you add or edit content on your site.

Please take a look at a few sites using Site Commander:

- ▶ www.westbendelev.com ▶ www.avantministries.org
- ▶ www.upamed.org ▶ www.ussabaseball.org ▶ www.nwbconline.org
